

User Stories — Module 2: RAD-SCH

US ID	Role	User Story	Acceptance Criteria	Priority	Module
US-RS-05	MediChain System	As the MediChain System , I want to automatically select the best appointment slot based on exam duration, request order, and case priority, <i>so that device usage is optimized.</i>	System evaluates all pending requests before assigning a slot. EMERGENCY cases are given the highest priority. Short-duration exams are optimized to fill time gaps. Best slot is assigned without manual input.	High	RAD-SCH
US-RS-06	MediChain System	As the MediChain System , I want to automatically reschedule all affected appointments when a radiology device breaks down, <i>so that service continuity is guaranteed.</i>	System detects device failure and identifies affected appointments. All affected appointments are rescheduled to available devices automatically. A notification is triggered for each affected patient immediately.	High	RAD-SCH
US-RS-07	Notification System	As the Notification System , I want to send preparation instructions to the patient when an appointment is created, <i>so that the patient is informed in time.</i>	Notification is sent immediately upon appointment creation. Notification includes preparation instructions and appointment time. Delivery is confirmed and logged in the system.	High	RAD-SCH
US-RS-08	Notification System	As the Notification System , I want to send a rescheduling notification to the patient when their appointment is affected by device downtime, <i>so that they are immediately aware of the change.</i>	Notification is sent as soon as rescheduling is completed. Message includes the new date, time, and assigned device. Notification is logged with timestamp and delivery status.	High	RAD-SCH
